

# Project report: 26.03.17

**Project status:** staying within budget. Scope finished: around 30%.

## **What was accomplished since the last meeting?**

- project specification analysed, with issues raised
- project documentation finished
- working prototype versions of client and server programs finished:
  - multiple clients handled by server
  - messages are passed between in form of XML strings
  - possibility to debug the client and server programs through verbose textual output

## **What will we be working on during the next week?**

- integration and unit tests for server and client
- dynamically create XML messages with proper message content

## **Product backlog:**

- multiple clients handled by server, possible to set a limit
- messages are passed between the client and server applications
- client and server applications are runnable with different settings through command-line arguments, including verbose mode
- messages are encoded strings containing appropriate XMLs
- client and server both able to receive and read the contents of messages
